

Andrew (Jaehyung) Choi

Cambridge, UK | (+44) 7467-245855 | jaehyungchoi0923@gmail.com | <https://www.linkedin.com/in/jaehyung-andrew-choi/>

EDUCATION

University of Cambridge – Cambridge, UK

Expected June 2027

Engineering Tripos (BA & MEng) | Grade: 1st Class in 1st year, Upper 2:1 in 2nd year

Concentration: Information and Computer Engineering

PROFESSIONAL EXPERIENCE

Experiential Robotics / Allogy – Denver, Colorado, USA

October 2025 – Present

Software Developer

- Developed an intelligent document processing pipeline leveraging Unstructured API with file-type-optimized strategies (VLM for PDFs, HI_RES for complex layouts) to extract structured data from multi-format documents (PDF, DOCX, PPTX, HTML, Markdown), enabling automated data extraction and analysis workflows.
- Implemented an LLM-enhanced contextual chunking system using Azure OpenAI for semantic text segmentation with parallel processing capabilities, generating context-aware chunks with rich metadata preservation for improved retrieval accuracy in RAG applications.

Arm Ltd – Cambridge, United Kingdom

July 2024 – September 2025

Software Engineering Intern (15 months Placement)

- Migrated flagship Arm MOOC courses from Mbed OS to modern stacks (MicroPython, CMSIS, IoT with MQTT/AWS), ensuring long-term maintainability and improving learning resources
- Designed and deployed an AI-powered chatbot using Retrieval-Augmented Generation (RAG), AI Agents, and LangChain in Azure AI Studio, improving productivity and response accuracy
- Built automation tools in Python, including a compliance-checking system reducing manual workload by 10+ hours per cycle, and a metadata generation tool using GPT-5 and LangChain
- Developed and optimized LLM models on ARM devices (Android/iOS) through pruning and quantization
- Created a Developer Labs website with improved UX, search/filtering, and automated CI/CD pipelines, driving community adoption and contributions
- Organized a 32-hour AI on Arm hackathon with Cambridge University Engineering Society, engaging developers in exploring AI applications on ARM architecture.

Auto-ID Labs KAIST – Daejeon, South Korea

June 2023 – September 2023

Machine Learning Research Intern

- Built an AI Speaker on Raspberry Pi, integrating OpenAI Whisper, GPT-3.5-Turbo, and Humelo TTS API.
- Deployed deep learning models (YOLOv8, FastSAM, Ultra-Fast-Lane-Detection-V2) on edge devices, including Xilinx FPGA and NVIDIA Jetson Orin.
- Designed a real-time lane detection system using GoPro Hero11 and NVIDIA Jetson AGX Orin; optimized inference with TensorRT for lane departure warnings.

LEADERSHIP & PROJECTS

Claude Builder Ambassador – *University of Cambridge*

August 2025 – Present

- Established Cambridge's official Claude Builder Club, partnering with Anthropic to build a 300+ member community of students and researchers exploring frontier AI applications, making it one of the university's most rapidly adopted technical societies.
- Orchestrated a 32-hour hackathon focused on AI safety and MCP-based applications, engaging 70+ participants who delivered 13+ innovative projects demonstrating practical AI safety implementations and novel use cases.

LANGUAGES, AND SKILLS

Languages: Korean (Native), English (Professional Working Proficiency)

Skills: Python, C, C++, Embedded Systems, Embedded C, FPGA, CMSIS, Git, Docker, ARM Architecture, AWS EC2, Linux
